In response to applicant's amendment dated November 29, 2011. The following action is taken:

Claims 1-8 and 10-20 are rejected for the same reasons under35 U. S. C 102(b) as being anticipated by Hahimoto (US 5706271) as stated in the previous office action.

Claim 21 is rejected under 35 U. S. C 103 rejection under Hashimoto (US 5706271) as stated in the previous office action.

Applicant's arguments filed November 29, 2011 have been fully considered but they are not persuasive. The claims are broadly cited that read on a disk having management area (inherently known as TOC) and designation areas made of clusters or sectors (data areas, another TOC area, lead in area, lead out area, DMA....etc). The data in a designated area is related in a way to a management area indicating a filed, used or not available area or sector.. Applicant's argument on page 7 last line indicating that the reference (prior art) showing "no longer in usable) actually read on the claimed "filed". In response to applicant's argument on page 8 second paragraph, the examiner sees no distinction between a data indicating that a partition (sector, cluster) "has been used" and what is agued by applicant as "is in use". In response to applicant's argument on page 8 third paragraph. The argument is not supported by the claimed invention. The claims do not recite nor drawn to a "TDMA" but rather drawn to a disk with an inherent feature of having a TOC management area. The arguments cited on page 8 last paragraph to page 11 are moot. The rejection is made based on the

examiner's broad interpretation of the claimed invention wherein a disk having PCA

area and a count indicating a used area read on the claimed invention.

The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure. 7355934; 6606285; 7233550; and 7272086.
